Here's a map from a Superfund Five Year review report (2007) w all the wells (private wells, ag wells, monitoring wells...) included. My records indicate the E3 facility is located...

*"in the southern half of Section 12, Township 14 North, Range 8 East. This property is north and east of NOP Load Line 1, and just south of a groundwater monitoring well installed at the Site, MW-57B."*

On the attached map, MW-57 would be on the far western side of the site, north and slightly east of the multicolored contaminant plume. There was no site related GW contamination noted in this area at the time of this report, and there are no private wells noted near that area. The GW flow direction here is generally south/southeast.

Please let me know if you have any questions or if I can be of any help.

Scott

Hey, Jamie and Scott. Turns out the AltEn site is on a SUPR site. Alyse Stoy sent me some background info and suggested Scott (former RPM on the site) may have information concerning local DW wells. Just passing this on.

Clarissa is lead for ORC. Angela Acord is lead for WENF.

Let me know if you have questions.
